

SyncLedger — Product Overview

AI-Powered Invoice Processing & Accounts Payable Automation

The Problem

Every growing business faces the same AP bottleneck:

- **Manual data entry** — Staff spend 15–30 minutes per invoice keying data into spreadsheets or ERPs.
- **Slow approvals** — Paper trails and email chains stretch invoice cycles to 2–7 days.
- **Costly errors** — Manual processes yield ~15% error rates, leading to duplicate payments, missed discounts, and audit failures.
- **No visibility** — Finance leaders lack real-time insight into outstanding liabilities and cash flow.
- **Scaling pain** — As invoice volume grows, the only option is to hire more AP clerks.

The result: Wasted labor, late-payment penalties, strained vendor relationships, and finance teams buried in paperwork instead of strategy.

The Solution: SyncLedger

SyncLedger is a **cloud-based, AI-powered platform** that automates the entire invoice lifecycle — from receipt to ERP posting — in minutes instead of days.

Invoice Arrives → AI Reads & Extracts → Team Reviews & Approves
(Email/Upload) (GPT-4o Vision) (One-Click Workflow)

Your AP team stops doing data entry and starts doing what matters: **reviewing, approving, and controlling spend.**

How It Works

1. Invoices Arrive Automatically

SyncLedger monitors a dedicated **Microsoft 365 inbox** every 5 minutes. PDF invoices attached to incoming emails are automatically detected, downloaded, and queued for

processing — with zero manual intervention.

Invoices can also be **uploaded manually** via drag-and-drop (PDF, JPG, PNG, TIFF supported).

2. AI Reads Every Invoice

Our **3-tier AI extraction engine** analyzes each invoice:

Tier	Technology	Role
Primary	GPT-4o Vision	Reads the invoice as an image — understands any layout, any vendor, any language
Secondary	GPT-4o Text	Extracts structured data from embedded text layers
Validation	Pattern Matching	Cross-validates results and calculates confidence scores

What gets extracted:

- Vendor name, address, email, tax ID
- Invoice number, date, due date
- Line items with descriptions, quantities, unit prices
- Subtotal, tax, total amount, currency
- PO number, payment terms
- GL account codes, project/job codes, cost centers

No templates required. SyncLedger understands any invoice format from any vendor on the first encounter — including scanned documents and handwritten invoices.

3. Your Team Reviews & Approves

Invoices appear in a clean, **side-by-side review interface**:

- **Left panel:** Full PDF viewer with zoom and fullscreen controls
- **Right panel:** AI-extracted data with color-coded confidence scores (High / Medium / Low)

Reviewers can:

- Edit any field inline if a correction is needed
- Approve with one click
- Reject with a required comment (routed back for resubmission)
- Batch-approve multiple invoices at once

Configurable approval rules support multi-level chains, amount thresholds (e.g., invoices over \$10K require two approvers), and routing by vendor, department, or project.

4. Approved Invoices Sync to Your ERP

Once approved, invoices **automatically post** to your accounting system:

ERP System	Integration
Sage Intacct	Production-ready — AP bills, dimensional posting, multi-entity support
QuickBooks	Bills and accounts payable
NetSuite	Vendor bills and subsidiaries
Oracle	Purchase invoices and GL journals
SAP	Vendor invoices and cost allocation
Xero	Bills and invoice sync
Custom API	REST/JSON/XML for proprietary systems

What syncs per invoice: Vendor ID, invoice number, dates, line items with GL codes, project codes, department codes, tax assignments, and a complete audit link.

Failed syncs automatically retry with exponential backoff (3 attempts). Manual retry is always available. Every sync attempt is logged with request, response, duration, and result.

The Dashboard & Analytics

SyncLedger provides a **real-time, customizable dashboard** that refreshes every 30 seconds:

Key Metrics at a Glance

- **Invoice volume** — Total, pending, approved, processing counts
- **Financial summary** — Total amount, pending amount, approved amount, synced amount
- **Email processing** — Processed today, unprocessed, errors
- **Sync performance** — Success rate, failed syncs, average sync time

Interactive Charts & Widgets

- **Invoices by Status** — Pie chart breakdown
- **Monthly Invoice Volume** — Trend analysis (bar/area chart)
- **Top Vendors by Spend** — Ranked bar chart
- **Financial Trends** — Amount over time (area chart)
- **Email Processing Metrics** — Real-time stats

- **Sync Performance** — Success rates and throughput

Widgets are **drag-and-drop customizable** — add, remove, resize, and reorder to match your workflow. Filter by date range (Today, This Week, This Month, or custom).

Vendor Management

SyncLedger **automatically recognizes and tracks vendors** from processed invoices:

- **Vendor directory** with contact information, tax IDs, and payment terms
 - **Spend analytics** per vendor — total invoices, total spend, status breakdown
 - **Monthly volume charts** per vendor
 - **Quick navigation** from any invoice to its vendor profile and back
 - **Search and filter** across your entire vendor base
-

Complete Audit Trail

Every action in SyncLedger is recorded with full traceability:

- **Who** performed the action (user, role, organization)
- **What** changed (field-level before/after values)
- **When** it happened (timestamped to the second)
- **Why** (rejection comments, sync error details)

The audit timeline covers the entire invoice lifecycle: received → extracted → reviewed → approved/rejected → synced → posted. This provides **compliance-ready documentation** for internal and external audits.

Multi-Tenant Architecture

SyncLedger is built for organizations of any size, with **complete data isolation** between tenants:

Resource	Isolation
Database records	Filtered by organization ID on every query
File storage	Separate AWS S3 folders per organization
Processing queues	Independent SQS queue per organization
ERP configuration	Each org connects to their own ERP instance
GL mapping profiles	Custom chart-of-accounts mapping per organization
User accounts	Organization-specific user base

Audit logs	Visible only within the organization
Email inbox	Dedicated mailbox per organization

Role-Based Access Control

Four roles with granular, least-privilege permissions:

Capability	Admin	Approver	Viewer
View dashboard & invoices	✓	✓	✓
View vendor analytics	✓	✓	✓
Approve / reject invoices	✓	✓	—
Edit extracted invoice data	✓	✓	—
Trigger ERP sync	✓	—	—
Manage users & roles	✓	—	—
Configure ERP & mappings	✓	—	—
Manage subscription & billing	✓	—	—

Security & Compliance

Layer	Standard
Data in transit	TLS 1.3 — HTTPS only
Data at rest	AES-256-GCM encryption (S3, RDS, EBS)
ERP credentials	AES-256-GCM encrypted; decrypted in-memory only at sync time; never exposed in UI
Authentication	JWT with 1-hour expiry + secure refresh token rotation
Session management	Server-side tracking, per-device visibility, remote revocation
Database	PostgreSQL with row-level security enforcement
Backups	Automatic with 7–90 day retention (plan-dependent)

Compliance posture:

- SOC 2 Type II (in progress for Enterprise accounts)
- GDPR-ready data handling
- ISO 27001-aligned infrastructure

- Multi-region disaster recovery (Enterprise plan)

White-Label Ready

SyncLedger supports **full white-label deployment** for partners and resellers:

- Custom logo, brand name, and tagline
- Configurable color themes and gradients
- Custom login page messaging
- Branded exports and reports
- Partner company name in copyright and contact details

Build-time brand configuration ensures a seamless, native experience for end users under your brand.

Pricing

Plan	Monthly	Annual	Invoices/Month	Users	Storage	Support
Trial	Free	—	200	5	10 GB	15 days
Starter	\$349	\$3,490	1,000	3	50 GB	24hr email
Professional	\$649	\$6,490	5,000	15	200 GB	4hr priority
Business	\$799	\$7,990	10,000	30	500 GB	2hr priority
Enterprise	\$1,499	\$14,990	20,000	Unlimited	Unlimited	1hr 24/7

All plans include: GPT-4o Vision AI processing, AWS infrastructure, email monitoring, approval workflows, ERP synchronization, dashboard analytics, and Excel export.

Overage rates: \$0.08–\$0.15 per invoice beyond plan limits (varies by tier).

Onboarding: Standard setup from \$2,500 (includes configuration, training, and go-live support).

Uptime SLA

Plan	SLA
Starter	99.5%

Professional	99.7%
Business	99.8%
Enterprise	99.9% (with credit guarantees)

Return on Investment

Before vs. After SyncLedger

Metric	Manual Process	With SyncLedger	Improvement
Time per invoice	15–30 min	1–3 min	80% faster
First-pass accuracy	~85%	97%+	12pp improvement
Invoice cycle time	2–7 days	1–2 hours	90% faster
Cost per invoice	\$15–25 (labor)	\$0.08–0.15	98% cheaper
Error/rework rate	3–5%	< 1%	95% fewer errors
Late payment penalties	~\$3,000/year	~\$0	Eliminated

Example: 8,000 Invoices/Month

	Before	After
Monthly labor cost	\$80,000	\$12,000
SyncLedger subscription	—	\$799
Errors & rework	\$400	\$50
Late penalties	\$250	\$0
Monthly total	\$80,650	\$12,849
2-year total	\$1,935,600	\$308,376

2-year savings: \$1.6M+ (84% cost reduction)

Implementation Timeline

SyncLedger is operational in **1–2 weeks**, not months:

Phase	Duration	What Happens
Setup	3–4 days	Organization creation, email integration, ERP credentials, GL mapping configuration, user accounts
Pilot	2–3 days	AI accuracy validation with your real invoices, workflow testing, approval chain configuration
Go-Live	1–2 days	Production launch, team training, hypercare support

Included with onboarding:

- GL code mapping for your chart of accounts
- Email inbox integration and testing
- ERP API testing and validation
- Admin and end-user training
- Monthly performance reviews for the first 90 days

Why SyncLedger

	SyncLedger	Template-Based Automation	Manual Processing
Setup time	1–2 weeks	12–18 weeks	N/A
AI quality	97%+ (GPT-4o Vision)	80–85% (template rules)	~85% (human)
New vendors	Instant — no setup needed	New template per vendor	Manual interpretation
Scanned PDFs	✅ Full support	Limited	❌
Cost per invoice	\$0.08–0.15	\$0.20–0.40	\$15–25
Scalability	Unlimited	Linear with headcount	Linear with headcount
ERP integrations	6+ systems	Usually 1	Manual entry

Ideal For

- **Mid-market and enterprise companies** (50–5,000 employees) processing 500–50,000 invoices per month

- **Industries:** Construction, Manufacturing, Professional Services, Retail, Technology, Finance Shared Services
- **Teams using** Sage Intacct, QuickBooks, NetSuite, Oracle, SAP, or Xero
- **Organizations on** Microsoft 365 for email

Technology Platform

Component	Technology
Frontend	React 18, TypeScript, Tailwind CSS, Vite
Backend API	Java 21, Spring Boot 3.2
AI Microservice	Python, FastAPI, GPT-4o Vision, Tesseract OCR
Database	PostgreSQL 16
Cloud Infrastructure	AWS (EC2, RDS, S3, SQS)
Infrastructure as Code	Terraform
CI/CD	GitHub Actions

Get Started

1. **Free Trial** — 200 invoices, 5 users, 15 days. No credit card required.
 2. **Live Demo** — See SyncLedger process your invoices in real time.
 3. **Pilot Program** — 2-week guided implementation with your data.
